

Experiment No.3

```
text= input("Enter a string ")
print("Length :", len(text))
print("Upper case:" , text.upper)
print("Lower case", text.lower)
print("Reversed string: ", text[::-1])
char=input("Enter characters to count")
print("Count:" , text.count(char))
words= text.split()
print(words)
words=["Java", "Python", "c"]
result="".join(words)
print(result)
sub= input("Enter substring")
if sub in text:
    print("Substring found")
else:
    print("Substring not found")
old=input("Enter a word to replace")
new=input("Enter new word")
print("New string:", text.replace(old,new))
```

Output:

The screenshot shows a terminal window in Visual Studio Code. The terminal output is as follows:

```
Enter a string Hello World
Length : 11
Upper case: <built-in method upper of str object at 0x000001325A1AFD70>
Lower case: <built-in method lower of str object at 0x000001325A1AFD70>
Reversed string: dlrow olleH
Enter characters to count Hello
Count: 0
['Hello', 'World']
JavaPythonc
Enter substring World
Substring found
Enter a word to replace Hello
Enter new word HELLO
New string: Hello World
PS C:\Users\hp\AppData\Local\Programs\Microsoft VS Code>
```

The terminal window has a dark theme. The left sidebar shows the Explorer, Search, and Run and Debug views. The bottom status bar indicates the current file is at Line 26, Column 1 (594 selected), with 4 spaces, UTF-8 encoding, CRLF line endings, and the Python 3.14.3 interpreter.
