

Experiment No.9

#Single Inheritance

```
class Student:
```

```
    def __init__(self, name):
```

```
        self.name = name
```

```
class Attendance(Student):
```

```
    def show(self, days_present, total_days):
```

```
        percent = (days_present / total_days) * 100
```

```
        print(self.name, "Attendance:", percent, "%")
```

```
s = Attendance("ABC")
```

```
s.show(45, 50)
```

#Multiple Inheritance

```
class Company:
```

```
    def __init__(self, cname):
```

```
        self.cname = cname
```

```
    def show_company(self):
```

```
        print("Company:", self.cname)
```

```
class Department:
    def __init__(self, dname):
        self.dname = dname

    def show_department(self):
        print("Department:", self.dname)

class Employee(Company, Department):
    def __init__(self, cname, dname, ename):
        Company.__init__(self, cname)
        Department.__init__(self, dname)
        self.ename = ename

    def show_employee(self):
        print("Employee:", self.ename)

e = Employee("Infosys", "IT", "ABC")
e.show_company()
e.show_department()
e.show_employee()
```

Output:

The screenshot shows a Visual Studio Code (VS Code) terminal window. The terminal is running a PowerShell command to execute a Python script. The output of the script is displayed in the terminal. The command executed is:

```
PS C:\Users\hp\AppData\Local\Programs\Microsoft VS Code> & C:\Users\hp\.local\bin\python3.14.exe "c:/Users/hp/OneDrive/Desktop/python programs/pa9.py"
```

The output of the script is:

```
ABC Attendance: 90.0 %  
Company: Infosys  
Department: IT  
Employee: ABC
```

The terminal window also shows the file explorer on the left and the search bar at the top. The status bar at the bottom indicates the current line and column (Ln 46, Col 18) and the selected text (1021 selected).
